Profile Summary

Data Scientist and Machine Learning Engineer with hands-on experience in building end-to-end AI solutions across healthcare and analytics domains. Skilled in Generative AI, RAG systems, SQL generation, data visualization, and deploying scalable Python applications using modern ML frameworks and cloud platforms.

Technical Skills

Python, SQL, HTML, CSS, NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn, Flask, TensorFlow, NLP, Transformers, Generative AI, Prompt Engineering, Retrieval-Augmented Generation (RAG), Embeddings, Vector Databases (FAISS, Chroma, Pinecone), Agentic AI, LangChain, LangGraph, Azure OpenAI, AWS (EC2, S3, Lambda, SageMaker), CI/CD, Git/GitHub, Linux, Windows, SQLite.

Experience

AI & ML Intern

6 Months

Vcitysoft Pvt. Ltd.

- Developed end-to-end analytical and AI solutions across financial and healthcare domains using Python and machine learning techniques.
- Built scalable, production-ready Python applications using Object-Oriented Programming and the Flask framework.
- Worked extensively with SQL databases, data visualization, and core ML libraries to extract insights and build intelligent systems.
- Collaborated with stakeholders and teams to ensure seamless communication, professional delivery, and effective problem-solving.
- Gained experience working in Linux and Windows environments with exposure to AWS and Azure cloud platforms.

Education

Bachelor of Engineering in Electronics and Telecommunication Engineering

2024

Savitribai Phule Pune University

CGPA: 8.25

Projects

Deep Farming: Enhancing Crop Disease Surveillance with Deep Learning Models

Python, TensorFlow, NumPy, Pandas, Scikit-Learn, Flask, Git/GitHub

- Developed a smart farming solution to detect crop diseases using deep learning and image processing techniques.
- Built a CNN model with image preprocessing, benchmarked performance against a Random Forest classifier.
- Deployed the model using a Flask web application for real-time disease prediction.

Intelligent SQL-Gen: Transforming NLP to Queries via RAG Architecture

Python, Azure OpenAI, LangChain, FAISS, Streamlit, Git/GitHub

- Designed a RAG-based system that converts natural language queries into accurate SQL queries for structured data access.
- Implemented semantic schema linking using vector databases to identify relevant tables and columns.
- Reduced hallucinations and improved SQL execution accuracy through evaluation and monitoring pipelines.

Healthcare Guidance Navigator using Agentic AI

Agentic AI, RAG, LangChain, LangGraph, ChromaDB, Streamlit

- Developed a healthcare chatbot providing document-specific clinical guidance from PDFs and CSV files.
- Built intelligent retrieval pipelines with vector databases for real-time insights and follow-up query handling.

Achievements/Certification

- 3rd Position at IETE's Project Competition.
- Best Paper Award at ICIIST.
- Java Programming Certification.
